

Prerequisites

Team ID : PNT2022TMID29091

Project Name : A novel method for handwritten digit recognition system.

Anaconda Navigator and all the packages required are installed by all the team members. Software requirements are satisfied.

Anaconda Navigator Installation

Anaconda Navigator is a free and open-source distribution of the Python and R programming languages for data science and machine learning related applications. It can be installed on Windows, Linux, and macOS. Conda is an open-source, cross-platform, package management system. Anaconda comes with so very nice tools like JupyterLab, Jupyter Notebook, QtConsole, Spyder, Glueviz, Orange, Rstudio, Visual Studio Code. For this project, we will be using Jupiter notebook and spyder.

Jupyter Notebook

The screenshot shows a web browser window displaying the Jupyter Notebook interface. The address bar shows the URL `localhost:8888/tree/Desktop/python%203`. The Jupyter logo is visible at the top left, and there are 'Quit' and 'Logout' buttons at the top right. Below the navigation tabs (Files, Running, Clusters), the 'Files' tab is active, showing a file browser view of the `Desktop / python 3` directory. A table lists the files and folders in this directory, including their names, last modified times, and file sizes.
